

Shocked, it didn't workMohammad Almutawa¹

1 Cardiac care program, NL health Services - Memorial University, Canada

a case of a middle age man presented with inferior STEMI. He had previous stents in RCA. The RCA was occluded and heavily calcified. It was balloon and treated with shockwave balloon. It didn't work. We then used OA and then ballooned it and it worked.

IVUS and OCT used in this case.
