

Complex ISR Intervention Complicated by Coronary Perforation: Successful Bailout with DES and Balloon Optimization

Arun Kochar¹

1 Department of Cardiology, Fortis Hospital Mohali, India

Patient came with Chest pain, earlier he had PCI- DES to LAD was done (other hospital), there was a recurrence of chest pain, ECG s/o acute stent thrombosis with STEMI. Emergency thromboectomy followed by balloon angioplasty, he came to our hospital on vasopressor support. CAG was done which revealed CAD-SVD + STENT TO LM-LAD under IVUS guidance, during procedure a little perf was managed with NC balloon and then DEB.
